ATTACHMENT TO NOTICE OF ALLOWABILITY

Allowable Subject Matter

Claims 1-29 and 31 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to Claim 1, the prior art of record teaches many of the elements of the claimed invention, including a digital mammography method, comprising the steps of: using at least one sensor to detect radiation that has passed through an object, wherein the at least one sensor contains at least one sensor module and wherein the at least one sensor module contains one or more pixel columns which receive image data; arranging the object to be imaged in a compression structure that is essentially motionless, the compression structure comprising an essentially plane-like upper compression paddle and an essentially plane-like lower compression paddle or a shelf having an essentially plane-like top surface; scanning across said object with a beam which originates from a radiation source having a focus, the focus of the radiation source being essentially motionless in space, the beam being limiting to be narrower than the object to be imaged and adapted essentially to an active surface of the at least one sensor; moving the at least one sensor in synch with the scanning movement of the beam while at the same time the active surface is kept essentially at right angles to the beam on a plane formed by the scanning movement of the beam, wherein the movement of the at least one sensor is implemented by continuously adjusting the distance of the at least one sensor from the radiation source in such a way that the

trajectory of the at least one sensor underneath said breast is an essentially linear movement in the direction of the scanning movement of the beam.

However, prior art fails to teach or fairly suggest the method wherein said scanning with a beam takes place in a continuous fashion while keeping the said active sensor surface essentially at right angles to the beam on a plane formed by a linear scanning movement, in the manner required by Claim 1.

With respect to Claim 16, the prior art of record teaches many of the elements of the claimed invention, including a digital mammography imaging apparatus, which includes: a radiation source having a focus, the focus of the radiation source being essentially motionless in space; a sensor arrangement for detecting radiation, which arrangement contains at least one sensor formed of at least one or more sensor modules, said at least one sensor module containing one or more pixel columns which receive image data; a compression structure for positioning an object to be imaged, located within the area between the radiation source and the sensor arrangement, the compression structure comprising an essentially plane-like upper compression paddle and an essentially plane-like lower compression paddle or a shelf having an essentially plane-like top surface; means for limiting a beam from the radiation source essentially according to an active sensor surface of the said sensor arrangement; means for scanning across said object with a beam which originates from the radiation source; and, means for moving the said at least one sensor which belongs to the sensor arrangement in synch with the scanning movement of the beam; wherein the imaging apparatus includes means for continuously adjusting the distance of the at least one

sensor from the radiation source in a way that the trajectory of the at least one sensor in the direction of the scanning movement of the beam becomes essentially linear and takes place beneath the lower compression paddle or beneath the top surface of the shelf.

However, prior art fails to teach or fairly suggest the apparatus wherein said means for scanning with a beam is capable of scanning in a continuous fashion while keeping the said active sensor surface essentially at right angles to the beam on a plane formed by a linear scanning movement, in the manner required by Claim 16.

Claims 2-15, 17-29, and 31 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
